

# Student Outreach – tkIS India makes a presentation at IIT’s TechFest Engineering Fair...

tkIS India made a presentation to students from engineering institutions across India at the IIT-led Engineering Fair in the last week of October 2020. The virtual Fair was organised by the Students Wing of the IIT Bombay.

In the 2 hour session, tkIS India presented a carefully-designed capsule covering our engineering activities in the process, mechanical, piping, electrical, instrumentation and civil-structural disciplines. A PDMS film of a recently-completed major Caustic Soda project was used in part to explain the nuances of engineering in the aforesaid disciplines. A presentation on Project Management which helped transport the students from the engineering canvas to the implementation field followed.

Earlier, an overview of the capsule, and a brief view on our capabilities via a short film and a presentation, helped the students get an insight into the world of thyssenkrupp.

Students also benefited from a quick view of the employment and growth opportunities and culture of our organisation, and a career perspective from one of our IIT alumnus.

Around 80 students participated in the virtual event, which culminated in a Question-Answer Session and a test conducted online by the organisers.
