ETCHED GLASS DECORATION FILMS

The Graitack Etched Glass series is a range of high quality frosted PVC films (monomeric, polymeric and cast) as well as PVC-free films, for creating perfect and stunning sandblast effects on glass or mirrors in no time.

Glass decoration can be considered as a real art form. Frosted or sandblasted glass is used frequently to apply corporate logos or texts to glass, to create a comfortable atmosphere or to enhance privacy.

Graitack monomeric and polymeric Etched Glass films offer an easy and cost effective alternative to real glass refinement. They all come with a solvent based acrylic adhesive. Easy and clean

removal is guaranteed especially with TR102 and TR103. A special air escape adhesive, which asks for dry application, and which is available in four polymeric Graitack qualities, allows you to apply the film with extreme ease.

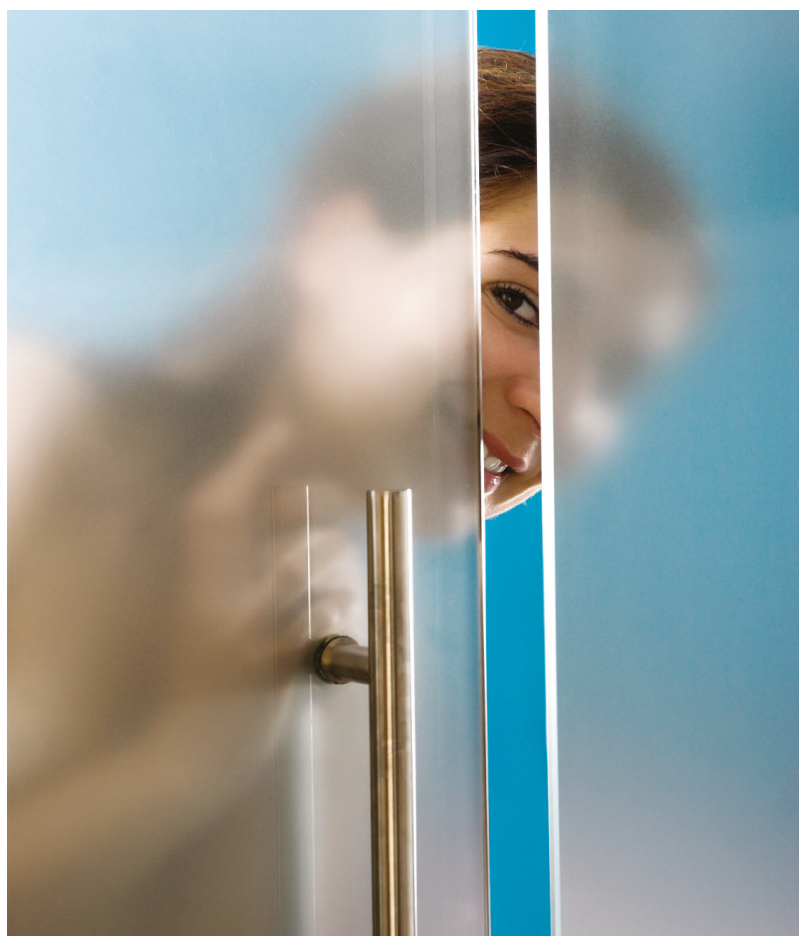

Cast etched glass films allow you to create a special structured frosted effect.

PVC-free etched glass films are the more environmentally friendly alternative to monomeric and polymeric etched glass films.

SANDBLAST FILMS

With Graftack SBT (medium duty, 230µm) and Graftack SBP (heavy duty, 370µm) sandblast stencils you can cut all desired logos and texts on a cutting plotter. Once completed they can be sandblasted in stone (e.g. for commemorative plaques, tomb stones,...), in wood, in glass,... Both films come with a removable acrylic adhesive, which enables the films to be easily removed again after sandblasting.
