

Customer name: Demo Customer
Order number: 1427XXXXXX
Delivery number: 2442XXXXXX
Item number: 900XXX
Batch number: 1056XXXXXX
Date of delivery: 2025-03-12
Product: TS 2294 PB- 76.80 664.00 846.00 RAR
Weight: 0.6936 metric tons

Total emissions: 2.2627 tCO₂e
Emission intensity: 3.2623 tCO₂e/t

Emissions by Life Cycle Stage

Upstream: 2.2252 tCO₂e
Supplier Delivery: 0.0039 tCO₂e
Processing & Warehousing: 0.0238 tCO₂e
Customer Delivery: 0.0097 tCO₂e

This declaration serves to attest that thyssenkrupp Materials Services has determined the Product Carbon Footprint (PCF) of the materials purchased by Demo Customer at the date stated above in accordance with the Greenhouse Gas Protocol for Product Life Cycle and Reporting Standard. Greenhouse Gas Accounting over the Product Life Cycle is a subset of life cycle assessments (LCA), which aims to consider environmental aspects and to quantify potential impacts on the environment throughout the life cycle of a product, from raw material extraction to end-of-life waste treatment.

thyssenkrupp Materials Services follows a cradle-to-gate approach to calculate the emissions of products as accurately as possible based on all available information and using supplier specific information or default data: From the supply of respective upstream materials to transportation to the customer.

In a limited assurance engagement, DNV validated the robustness of the methodology and tools applied by thyssenkrupp Materials Services Western Europe and Eastern Europe organizations to calculate product carbon intensities and issue product carbon intensity reports to customers. DNV have expressly not verified specific values applied within the greenability PCF Tool, values provided by CarbonChain or other third-parties, nor values presented in reports issued to customers, unless stated otherwise in DNV's full Assurance Report which can be accessed via the QR code.
