

Aluminum: Sheets, Profiles, and More

Extensive Selection. Fast Availability.
Aluminum Materials from the Specialist

Aluminum is a versatile material that offers a unique combination of strength and lightweight performance. To ensure maximum availability of sheets and profiles, tk accelis Materials has developed a comprehensive product portfolio with leading stock availability across Germany.

Sheets, Plates, Profiles, and Bars

Aluminum can be utilized in a wide variety of shapes and cut-to-size formats. Our broad product range and exceptional stock availability make this versatility readily accessible, enabling fast and efficient procurement.

Precision Processing

When cutting plates and profiles, every millimeter matters. Achieving precise results requires highly skilled specialists, advanced plate saws, and precision band and circular saws for bars and profiles. With our value-added processing services, this level of accuracy is ensured for every aluminum product.

Materials Available Directly from Stock

Benefit from Europe's largest central warehouse for non-ferrous metals. This significantly reduces lead times between order placement and delivery. We ensure rapid availability of aluminum materials, while short transportation routes from warehouse to production facility help strengthen and stabilize our customers' supply chains.

Reliable and Predictable

Consistent material quality and availability are key considerations for our customers. That is why we have established a wide range of systems and processes to continuously ensure and enhance the quality and availability of our materials and services. For long-term supply agreements, we offer not only price protection but also material reservation programs. In addition, through our mills and business partners, we provide access to aluminum sheets in standard fixed dimensions. This ensures a high level of availability, even beyond quantities already reserved.

We would be pleased to provide further information about our product range, processing capabilities, and outstanding delivery performance for aluminum materials.

Our team of specialists look forward to supporting your projects.
