

Sonaca continues to rely on thyssenkrupp Aerospace

Sonaca Montreal, a leading company in the manufacturing of large aluminum aerostructures, has opted for a long-term partnership with thyssenkrupp Aerospace and has extended its contract, which has been in effect since 2016. Through 2023, thyssenkrupp's aerospace experts will be responsible for warehouse and supply chain management as well as comprehensive processing services for the just-in-time materials required for the Sonaca location in Mirabel, Quebec.

"It is very important for us to precisely understand our customers' requirements, develop tailored solutions and ensure that they can concentrate fully on their core business," explains Arina van Oost, Managing Director thyssenkrupp Aerospace Canada, who adds: "Through various workshops and a close exchange we were able to further increase the service level for Sonaca and offer additional services".

In order to meet the increased requirements and ensure just-in-time deliveries on a daily basis, we invested in additional storage space and processing equipment. At the heart of this is the new waterjet cutting machine, which enables aluminum plate to be cut exactly to customer specifications.

Sonaca has committed to the cooperation: "thyssenkrupp Aerospace has established itself as a reliable partner and helps us to achieve our goals," says Paul Constanzo, who becomes CEO of Sonaca Montreal on July 1st.

thyssenkrupp Aerospace is a leading global supplier of materials, supply chain solutions and metal processing services for the aerospace industry. The company has a global network of 44 locations with over 2,000 employees in more than 20 countries.

About thyssenkrupp Materials Services

With around 480 locations – including 271 warehouse sites – in over 40 countries, thyssenkrupp Materials Services is the biggest materials distributor and service provider in the western world. The broad service spectrum offered by the materials experts enables customers to concentrate more on their individual core businesses and spans two strategic areas: global materials distribution as a one-stop shop – from steel, tubes and pipes, nonferrous metals and specialty materials to plastics and raw materials – and tailored services in the areas of materials management and supply chain management. An extensive omnichannel architecture offers 250,000 customers worldwide cross-channel, round-the-clock access to more than 150,000 products and services. A highly efficient logistics system ensures that all requested services are smoothly integrated into customer production processes “just-in-time” or “just-in-sequence”.
